

Galaxy

Bush green acorn squash with high yields, attractive fruit and good resistance to powdery mildew. Galaxy has a reduced groundspot compared to other varieties and maintains its color for longer in storage.

Growing Environment	Open Field
Market	Fresh Market
Resistances	IR: Px
Advantages	Reduced groundspot, holds color in storage
Shape	Round Acorn
Plant Habit	Bush
External Color	Dark Green
Relative Maturity	80 Days

HR = High Resistance. IR = Intermediate Resistance.

Performance may vary from location to location and from year to year, as local growing, soil and climatic conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's operation. Any recommendations provided on this technical sheet are based upon observations and feedback received from a limited number of trials and geographies. These recommendations should be considered as one reference point and should not be substituted for the professional opinion of agronomists, entomologists or other relevant experts evaluating specific conditions.
