

# Goldilocks

An edible ornamental! This bush acorn ripens to a bright golden orange color. High yields of 1 to 1.5lb fruit on compact plants. In national trials, All-America Selections judges noted that Goldilocks was early, productive, and preferred for taste and texture.

<b>Growing Environment</b>	Open Field
<b>Market</b>	Fresh Market
<b>Resistances</b>	IR: Powdery Mildew (Px)
<b>Advantages</b>	High yield, attractive appearance, early maturity
<b>Shape</b>	Round Acorn
<b>Plant Habit</b>	Bush
<b>External Color</b>	Orange/Yellow
<b>Relative Maturity</b>	70 Days

HR = High Resistance. IR = Intermediate Resistance.

Performance may vary from location to location and from year to year, as local growing, soil and climatic conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's operation. Any recommendations provided on this technical sheet are based upon observations and feedback received from a limited number of trials and geographies. These recommendations should be considered as one reference point and should not be substituted for the professional opinion of agronomists, entomologists or other relevant experts evaluating specific conditions.
